

Child Health & Screening

Maternal Health & Home Visiting Support

Early Childhood Mental Health Support

Child Health Practitioner Support

Support for Children with Disabilities

Health and Development

Making community resources more readily available for health care providers enriches the lives of the children in their care. The Collaboration coordinates home visiting services and administers vision, hearing, and developmental screenings.

Child Health and Screening:

Training early childhood pediatric and community sites to administer developmental screenings and conduct referrals as needed. The Collaboration’s Hearing & Vision Screening Technician administers screenings across the Oak Park and River Forest communities.

Maternal Health and Home Visiting Support:

Partnering with home visiting programs and the Village of Oak Park’s Public Health Nurse, the Collaboration helps families get connected to support through a single point of contact.

Early Childhood Mental Health Support:

Working with early childhood providers to navigate children’s social and emotional health needs and to help create an environment that nurtures children’s success in the classroom.

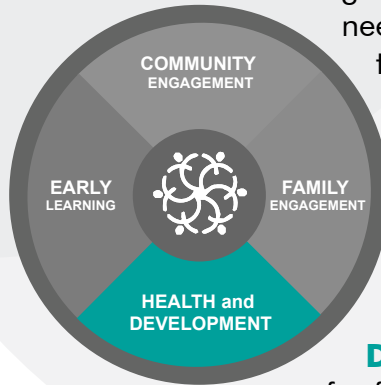

Child Health Practitioner Support:

Building community awareness and connections to early childhood health resources for health professionals.

Support for Children with

Disabilities: Serving as a resource hub for families with children with disabilities or developmental delays.
